## Papertec® 95/5

### **Papertec® 95/5 – Highly flexible packaging, either in kraft paper or film using one packing machine**

Thanks to our new concept in packaging, we can now offer the latest generation of machines that enables sustainable packaging of your products – in either paper or film.

A newly developed sealing system along the package edge has made this innovation possible; here a flat paper web (or film) is first guided from a roll over special deflectors and formed into a half tube.

Next within the Papertec® 95/5, the product enters the half tube which is then sealed along the three sides. When using sealable 95/5 paper, the completed pack is then separated with a cold knife.

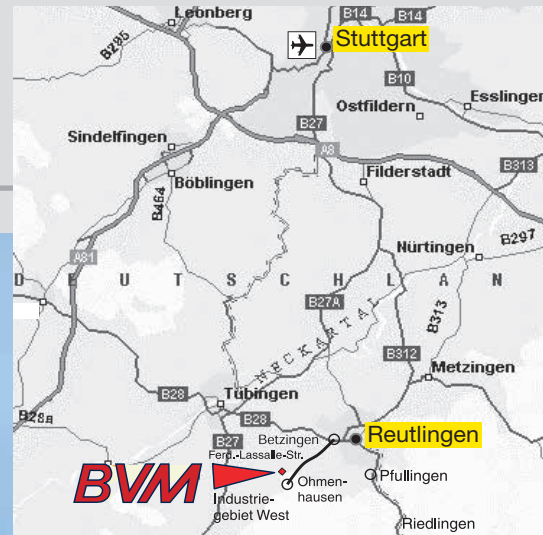

The paper is recyclable and withstands mechanical as well as shipping demands; the use of recyclable film is also possible.

The Papertec® 95/5 can easily be adapted to different product widths, whilst the pack length automatically adjusts during production.

To increase brand recognition of your shipments, the paper or film can be pre-printed with your logo or other advertising message. Finally, to perfectly equip your system for shipping you can fit the Papertec® 95/5 with scanners and an address labeller for labelling the products.

**Made in Germany**
